

**About**

I am a student full-stack web developer with a passion for solving problems. I am technologically-inclined and have had an interest in web development for a while, constantly learning as much as I can. In my free time, I enjoy designing and developing websites, watching screencasts, and improving my skills in web development. I also have experience using the latest and most popular technologies for web development, such as the Laravel PHP framework and the Vue JavaScript framework. More recently, I have been gathering interest in front-end design and learning about user-experience best practices. Programming is my passion, and web design and development is my art.
